Oxygen and Aerosol Therapy ▪ Oxygen Therapy

## Oxygen recovery T-piece with reservoir bag

The Intersurgical oxygen recovery T-piece with reservoir bag has been designed to deliver supplementary oxygen to post-operative, spontaneously breathing patients in transport and recovery whilst the airway is still in place. The light weight design means there is minimal pull on the patient's supraglottic airway or tracheal tube. The reservoir bag provides an audible and visual indication of respiration.

### Oxygen % delivered at different flow rates\*

Single-use, latex and phthalate free

\*This is a variable performance oxygen delivery device and as a result the oxygen concentration delivered will depend on the patient's breathing pattern.  
Reference: Internal test report, oxygen recovery T-piece with reservoir bag.

- Light weight**  
minimal pull on airway device
- Bag material**  
provides audible indication of respiration
- Bag inflation and deflation**  
provides visual indication of respiration
- 6mm spigot**  
complies with BS EN 13544-2, allows secure oxygen tubing attachment
- Standard 15mm connector**  
allows connection with supraglottic airways or tracheal tubes
- Reservoir bag fills with oxygen during expiration**  
to increase oxygen concentration delivered
- Low CO<sub>2</sub> rebreathing**
