i-gel® Resus Pack

Four things in one pack, one less thing to think about

Airway Management  •  Airway Devices
In emergency medicine, you need equipment that’s easy, rapid and reliable to use. The i-gel O₂ Resus Pack contains everything you need to prepare, insert and secure the i-gel O₂ quickly and efficiently: an i-gel O₂ supraglottic airway, a sachet of lubricant, airway support strap and a suction tube.

The i-gel O₂ incorporates a supplementary oxygen port and an integral hook ring for securing of the airway support strap.

The i-gel O₂ has been designed to facilitate ventilation as part of standard resuscitation protocols, such as those designated by the European Resuscitation Council (ERC) and the American Heart Association (AHA). However, the i-gel O₂ incorporates a supplementary oxygen port, so can also be used for the delivery of passive oxygenation, or Passive Airway Management (PAM™), as part of an appropriate CardioCerebral Resuscitation (CCR) protocol.

Airway innovation since 2007

i-gel is the innovative second generation supraglottic airway device from Intersurgical launched in 2007. The first major development since the laryngeal mask airway, the i-gel changed the face of airway management and is now widely used in anaesthesia and resuscitation around the world.

The non-inflatable cuff

The i-gel gets its name from the innovative soft, gel-like material from which it is made. It is the innovative application of this material that has enabled the development of a unique non-inflatable cuff. This means there is no need for cuff deflation prior to insertion and no cuff inflation after placement to secure a seal, shortening and simplifying the preparation and insertion procedure.

Insertion

The i-gel O₂ is incredibly easy to use. Insertion is rapid and can normally be achieved in less than 5 seconds. The simplicity of i-gel O₂ means the insertion technique is instinctive, reliable and does not require or benefit from the insertion of fingers or thumbs into the patient’s mouth.

Fixation

The i-gel O₂ Resus Pack includes a specially designed airway support strap for securing the i-gel O₂ in position. Fixation is easily achieved by sliding the strap under the patient’s neck and securing it in place to the hook ring on the collar of the i-gel O₂. This makes it ideal for use where adhesive tape is unsuitable, such as on patients with facial hair.

Video available at www.intersurgical.com
The i-gel O₂ Resus Pack is available in 3 adult sizes and includes:
- i-gel O₂ supraglottic airway
- Sachet of lubricant – for quick and easy lubrication of the i-gel O₂ prior to insertion
- Airway support strap – to secure the i-gel O₂ in position
- 12 FG suction tube – for insertion through the gastric channel to empty fluid from the stomach.
Ordering information

The i-gel O₂ Resus Pack contains an i-gel O₂, a sachet of lubricant, airway support strap and suction tube, all packaged in a specially designed clear, sterile, rigid pack. This unique design ensures protection of the contents, both in transit and in storage. The i-gel O₂ has a colour coded hook ring to allow quick and easy identification of size. The i-gel O₂ Resus Pack is available in three adult sizes.
